

Senior Environmental Manager/Engineer

Gresham, Smith and Partners – Dallas, TX

Requisition # 7583

<https://careers.gspnet.com/>

Are you a senior environmental manager with experience in cutting edge sustainability and environmental programs? Do you enjoy the challenge of consulting with and providing award-winning solutions for clients around the US? Do you value collaborating with an in-house, multi-disciplinary team on a wide variety of project types? We have expansive growth opportunities for the right individual!

Senior Environmental Manager/Engineer

Responsibilities include:

- Plan and implement a variety of environmental projects including sustainability planning, greenhouse gas emission inventories, environmental management systems, and multi-media compliance programs.
- Prepare reports for major projects.
- Interpret environmental regulations and voluntary certification programs.
- Prepare and review proposals and cost estimates.
- Manage, supervise and direct the ongoing progress of a project.
- Supervise junior team members and schedule and check work of project team members.
- Coordinate projects with clients, contractors, outside consultants and firm staff.
- Communicate and interact with project team members, client representatives, review agencies and others as appropriate to project.
- Resolve a variety of complex problems (e.g., conflicting design requirements, unsuitability of conventional materials, difficult coordination requirements).

Minimum Qualifications:

- B.S. or M.S. in the natural sciences or Civil Engineering or Environmental Engineering
- Fifteen years experience in environmental or engineering consulting for municipal and industry clients
- Experience in EMS development, compliance management, auditing, air emission inventories, and sustainability planning.
- Experience in storm water quality and quantity management
- Basic understanding of environmental regulations required
- Proven experience in developing project plans, implementing project tasks, anticipating and addressing project issues, managing and mentoring staff, leading meetings with clients, and preparing technical reports
- Proficient in Microsoft Office applications, particularly Word and Excel.

Desired Competencies:

- Works well within a team environment
- Strong problem solving skills, including ability to identify key issues
- Ability to think strategically, creatively and independently
- Strong verbal and written communication skills
- Time management skills
